

Are galvanized cable trays used indoors

Preview

This makes them suitable for both indoor and outdoor use, especially in environments exposed to moisture or chemicals. The trays come in different styles--ladder, solid-bottom, or wire mesh--each suited for specific needs. Galvanized cable trays are metal frameworks designed to support insulated electrical cables used in various installations. They are typically made from steel coated with zinc through a galvanization process, which protects against rust and corrosion. Outdoor: Hot-dip galvanized or stainless steel trays.

A cable tray is a structural system used to support insulated electrical cables and wires. It provides a safe and organized method for routing cables in commercial
