The powered fiber cabling solution combines high-performance, low-latency fiber-optic data connectivity with a copper low-voltage dc power connection. This enables the connection of any number of powered remote devices without the need for new conduit, bulky extra cable runs or expensive. PON uses remote optical line terminal (R-OLT) equipment for local distribution - and for cable broadband applications the OLTs are often located on an outdoor pole or inside a ground enclosure, sometimes tens of miles from the closest operations center. These PON deployments require reliable power. The Installation After the process of designing fiber optic networks is completed, the next step is to install it.
