An intelligent PDU, also known as smart PDU, goes beyond distributing power to IT equipment within the data center. There are two types of Power Distribution Units (PDUs), the basic type and the intelligent type. While both can provide reliable power distribution to critical IT equipment within a rack or cabinet, intelligent PDUs offer several smart features to help data center managers understand their power. High-Density Optimization: AI/ML workloads demanding upwards of 30kW to 100kW per rack require advanced 3-phase intelligent power distribution units. Smart Monitoring: Implementing an enterprise-grade Smart PDU solution is no longer optional for maintaining operational SLA. US Regulatory.
