

Price of Vertical Fiber Optic Distribution Cabinet

Article Overview

The price of a vertical fiber optic distribution cabinet typically ranges from \$500 to \$3,000 or more, depending on size, capacity, material, and features.

Factors Affecting Price

1. Cabinet Type and Capacity Vertical fiber optic distribution cabinets come in indoor and outdoor versions, wall-mounted, pole-mounted, or floor-standing configurations. Larger cabinets with higher fiber capacity or multiple rack units generally cost more . 2. Material and Durability Cabinets are commonly made from stainless steel or high-quality steel, with outdoor models offering IP55-IP65 protection against dust and water. Cabinets with higher environmental protection ratings are more expensive . 3. Features and Customization Additional features such as rack-mount compatibility, splice trays, PLC splitters, WDM modules, padlock doors, and cable management systems can increase the price. Custom dimensions or specialized mounting options also add to cost . 4. Brand and Supplier Prices vary by manufacturer. Brands like Clearfield, CommScope, and Multilink offer modular and configurable cabinets, which may be priced higher due to quality, warranty, and support services .

Typical Price Range

- o Small indoor cabinets: \$500-\$1,000
- o Standard outdoor vertical cabinets: \$1,000-\$2,500
- o High-capacity or fully customized cabinets: \$2,500-\$3,500+

Recommendations

- o Determine whether the cabinet is indoor or outdoor, as outdoor cabinets require higher protection and cost more.
- o Consider the number of fibers and rack units needed for your network.
- o Check if modular or expandable options are required for future network growth.
- o Contact suppliers directly for quotes, as prices can vary based on shipping, installation, and optional features . By evaluating these factors, you can select a vertical fiber optic distribution cabinet that balances cost, capacity, and durability for your network needs.
