

What are the different types of fiber optic strain sensors

Preview

There are two primary types of fiber optic strain sensors: the intensity-based sensors and the interferometric sensors. Optical strain sensors (or strain gauges) are sensors for compressive and/or tensile mechanical strain (deformation) which are based on optical technology -- in most cases, on fiber optics. As strain occurs, it alters the properties of the light traveling through the fiber, allowing for precise measurements.

An FBG (Fiber Bragg Grating) packaged sensor is a type of optical sensor that uses a fiber optic grating to detect and measure various physical parameters such as strain, temperature, and
